

VLF flare activity 2005/18.

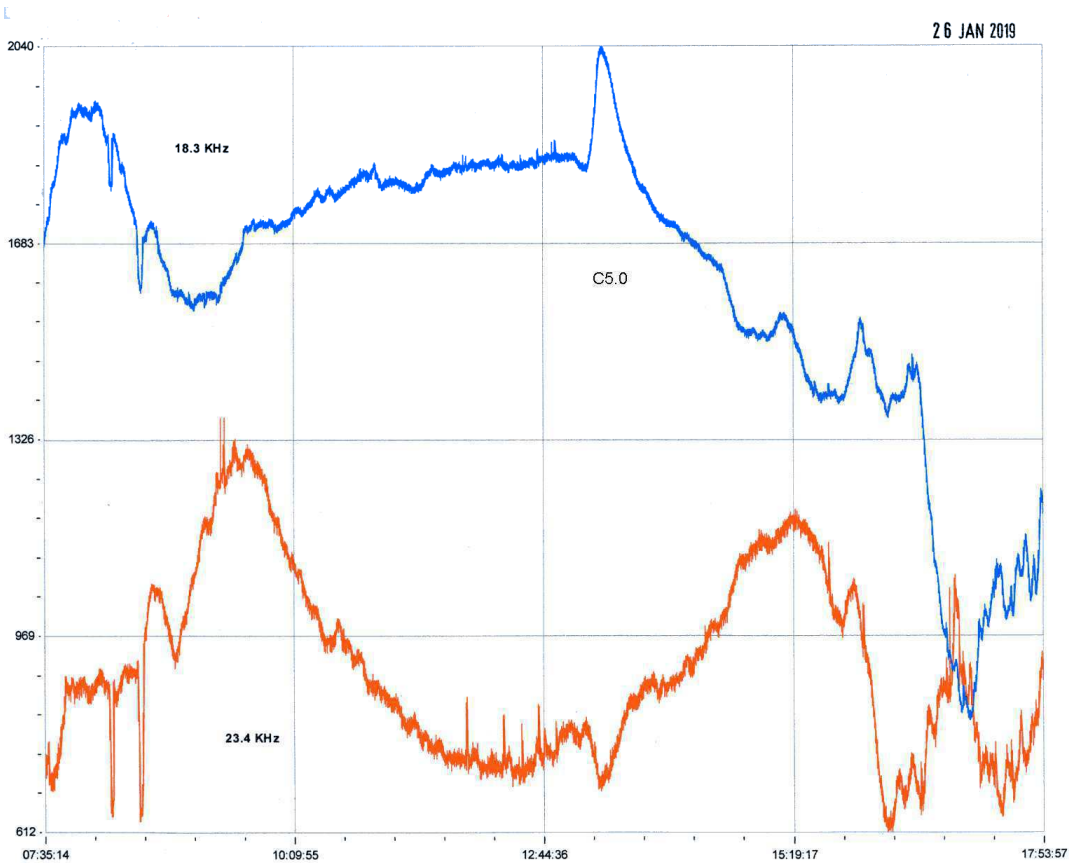

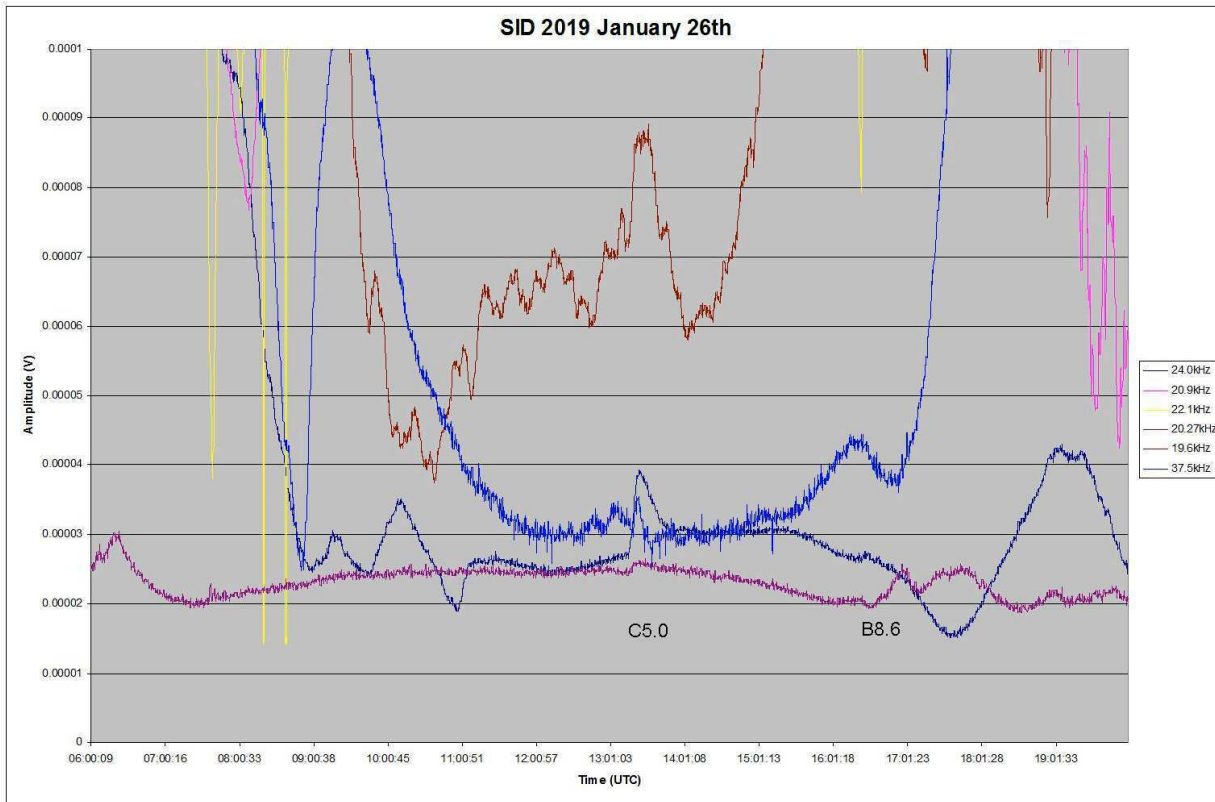

To start the year we have been able to record three C-class flares, the first since 2018 July. January began with the X-ray flux at around A1 levels, increasing for a few days either side of the C1.6 flare on the 6th. The background flux then faded back to A1 levels until the 22nd, when a new active region appeared. This produced numerous small flares as well as the C5.0 that we recorded. There was also a C5.2 flare at 06:11UT on the 30th, too early in the morning to record as a SID.

This recording by Paul Hyde shows the C1.6 flare peaking at 10:47UT on the 6th. It shows well at 37.5kHz (brown trace) and 20.9kHz (green). My own recording shows it at 23.4kHz, although it is less distinct in Paul’s recording at that frequency.

As AR 2733 appeared on January 21st, it developed a large sunspot count with plenty of low-level flaring before the C5.0 on the 26th. Mark Edwards’ recording shown on the next page also shows a smaller B8.6 flare peaking at 16:29UT on the 24kHz signal.

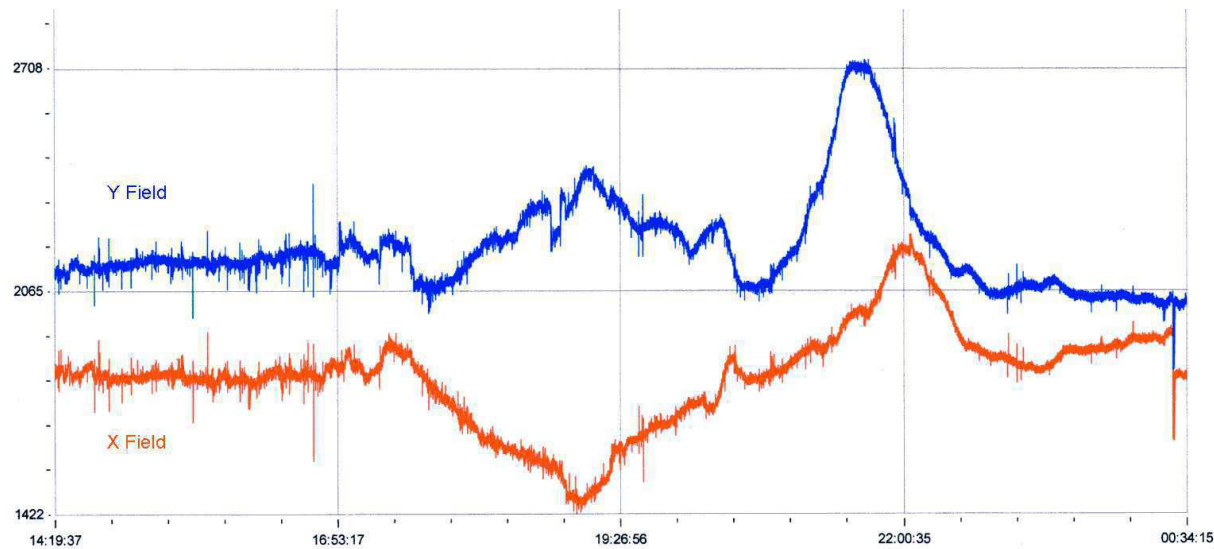

The C5 flare also shows well in this recording by Colin Clements. AR2733 continued to develop as it approached the solar limb, producing a C1.9 flare on the 29th and the C5.2 flare on the 30th as it disappeared from view.

MAGNETIC OBSERVATIONS.

There were no CMEs associated with any of this month's flares, coronal holes remaining as the major source of magnetic activity. The disturbance from the end of December continued into January 1st, but was very subdued. There was also a very mild disturbance over the 4th to 6th, and again from the 14th to 20th. A combination of north and south polar as well as a large equatorial coronal hole produced a slightly more active period from the 23rd to 25th.

Roger Blackwell's chart shows the disturbance overnight on the 23rd and through the morning of the 24th. Activity picks-up again about 17UT on the 24th, but then quickly fades. Colin Clements also has a good recording of this:

A very brief active period was recorded from 21UT until midnight on the 31st as more small coronal holes became involved.

Magnetic observations received from Colin Clements, Roger Blackwell, Gonzalo Vargas and John Cook.
