

Why Observe Visually in the 21st Century?

John Toone

BAA VSS, Edinburgh, October 2008

Visual Observing - Background

- In use for 160 years
- Two principle methods - step & fractional
- Measured to 0.1 mag
- Accuracy +/- 0.2 mag
- Systematic differences between observers
- Has been under threat for 100 years

Observations submitted to the BAA VSS in 2007

Method	Number	Observers	Average
CCDV	44568	5	8914
Visual	44205	33	1340

Advantages of Visual Observing

- Inexpensive
- Easy to learn and apply
- Setup speed
- Maximum photometric opportunities
- Instant preliminary reduction
- Timely alerts
- Target shift speed

Why Observe Visually in the 21st Century

- Large range variables do not require CCD accuracy levels
- CCD coverage of most variables is patchy
- Accurate V sequences geared towards visual observers are now available
- Extension of 160 year data series
- Timely alerts on unusual activity

CONCLUSION

- CCD observers have not made visual observers redundant
- Any variable star with a range exceeding one magnitude warrants visual monitoring
- The BAA VSS has the largest homogenous visual database and applies best practice procedures for visual data acquisition
- Your continued contribution is scientifically important and very much valued
